2020 Annual Report

February, 2021

Our Mission

FHCi is committed to expanding the use of and access to homeoprophylaxis (HP) internationally for the prevention of infectious contagious disease. We are dedicated to ongoing research regarding the efficacy and effectiveness of HP and its short-term and long-term health outcomes in participating children around the world. Through providing access to this safe, non-toxic program, our aim is for parents and communities to become empowered by witnessing the healthy maturation of their children and their immune systems.

Foundation

In 2009, a small group of homeopaths began the process of registering children to undertake a multi-year, self-administered HP program. This project, formally known as the Long-Term Homeoprophylaxis Study, marked the birth of FHCi and our formation as a non-profit dedicated to research, awareness, and access to homeoprophylaxis. Our focus has always been the health and well-being of children. All families enrolled in this foundational study were part of the long-term research study. Enrollment ended December, 2014, tracking was completed in 2018, and 2019 was spent verifying and analyzing the data. The results of this study have been made available on our website, through articles, peer-reviewed journals, and a self-published book. We continue to offer families and their children access to a variety of HP programs and our commitment to research continues.

1,765 children have enrolled in our Childhood Infectious Disease HP Program. Research shows those who use HP have improved general health outcomes and robust immune systems!

* Visit our website at freeandhealthychildren.org for detailed financials.

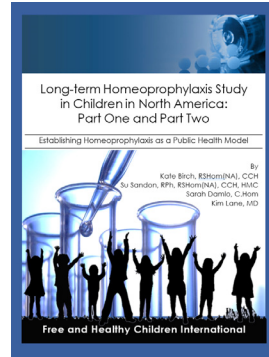

Free and Healthy Children International (FHCi) is a 501(c)3 non-profit: Research, Education, and Access to Homeoprophylaxis. EIN 46-2093772

You, our committed HP Supervisors and Families, are the catalyst to the change in healthy immunization by bringing this research data to other homeopaths, doctors, lawmakers, and families!

Long-term Study Results

Conclusions of our long-term study indicate that when middle-class families of unvaccinated and partially vaccinated children understand the protocol, and are supported by knowledgeable supervisors, they are able to successfully complete this HP program; and demonstrate that HP offers both unvaccinated and previously vaccinated children a low-risk immunization method that improves general health outcomes.

Parotidinum.....	Mumps
Morbillinum.....	Measles

History of Homeoprophylaxis

Homeoprophylaxis has been part of the practice of homeopathy for the last 200 years. However, it was not developed as a formal public health model for infectious disease until 1985, when Dr. Isaac Golden established a program under his research model in Australia. He continued to refine his study for 15 years, following over 2,500 children for the duration of that program. The statistics of his studies are noted in our book: **The Solution ~ Homeoprophylaxis the Vaccine Alternative.**

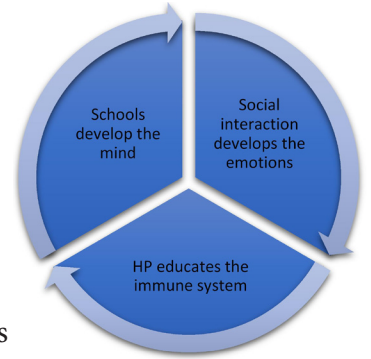

HP has been part of the practice of homeopathy for the last 200 years.

Why HP?

Homeoprophylaxis (HP) offers a multitude of benefits including disease recognition and resolution, fulfillment of underlying susceptibility – individual and familial, and the development and growth that comes after an illness. Parents know this. Many moms have seen their children crawl or begin to walk, or are able to speak clearer and communicate better after completing the circle of disease (fever, discharge, sweat, resolution). HP gives the chance to step into an illness willingly, bodies and minds are stronger because of it.

Volunteer and committee positions are available! The majority of FHCi's operations are accomplished through volunteers. From proof-reading to social media to fundraising; we ask you to contribute your talents! Look for these opportunities in our monthly family newsletters.

Together we are growing stronger children and families.

“I'm so grateful for the scope of education, the advanced levels of thinking, the industriousness, and the support of the collective group of homeopathic FHCi Supervisors [HP Supervisors] through FHCi. They are changing the landscape of children's health as we know it, one child at a time. The world doesn't know it but it's a better place because of FHCi's efforts and visions!
- Stacy C., HP Supervisor”

Corona Virus Research

In 2020 our commitment to research continued. At the onset of the COVID-19 pandemic, FHCi was poised to establish our own exploration regarding *HP application in real-time*. As HP Supervisors your interest and knowledge helped 1,169 individuals of all ages register into research! In June, our core team of nine Supervisors and six Family Members

began analysis of the data; our research was to determine the safety, effects, and efficacy of Novus-CV in humans regarding the immunological symptoms of COVID-19.

Our results suggest that Novus-CV offers a low-risk intervention that can be used in active cases to resolve Covid-like disease expression, including physical, mental and emotional components, can inhibit indications of Covid-19, and if used on a large

2020

scale can serve as a catalyst to pandemic resolution. While we do not know the grand results of our work on the pandemic, and we have been operating from the eye of the storm, we do know that each one of us was deeply transformed in our hearts and minds through the work. *The gratitude of participants in the study was palpable* through the feedback forms. This work is much larger than any one individual can fully comprehend – what we

1,169 individuals of all ages registered into our CV research!

can say is our hope is that those who come across this research will also access the shift in consciousness to another way of immune system education towards infectious disease.

Look for two articles forthcoming regarding safety and efficacy, and immunological and proving effects.

What our research participants are saying

“Thank you for doing this research. I have no interest in taking a vaccine and have been using homeopathy for 25+ years.”

“The shift in my overall well-being from the nosode has been enormous...”

“We love HP! I am a critical care paramedic nurse and wish you could integrate HP for coronavirus and homeopathy into emergency medicine.”

“I am grateful to have had access to this nosode. I am certain it alleviated my anxiety about getting sick.”

“I’ve been around many persons with Covid both in the hospital where I work and outside of work. I feel confident that this nosode helped me to fight it off and not contract it.”

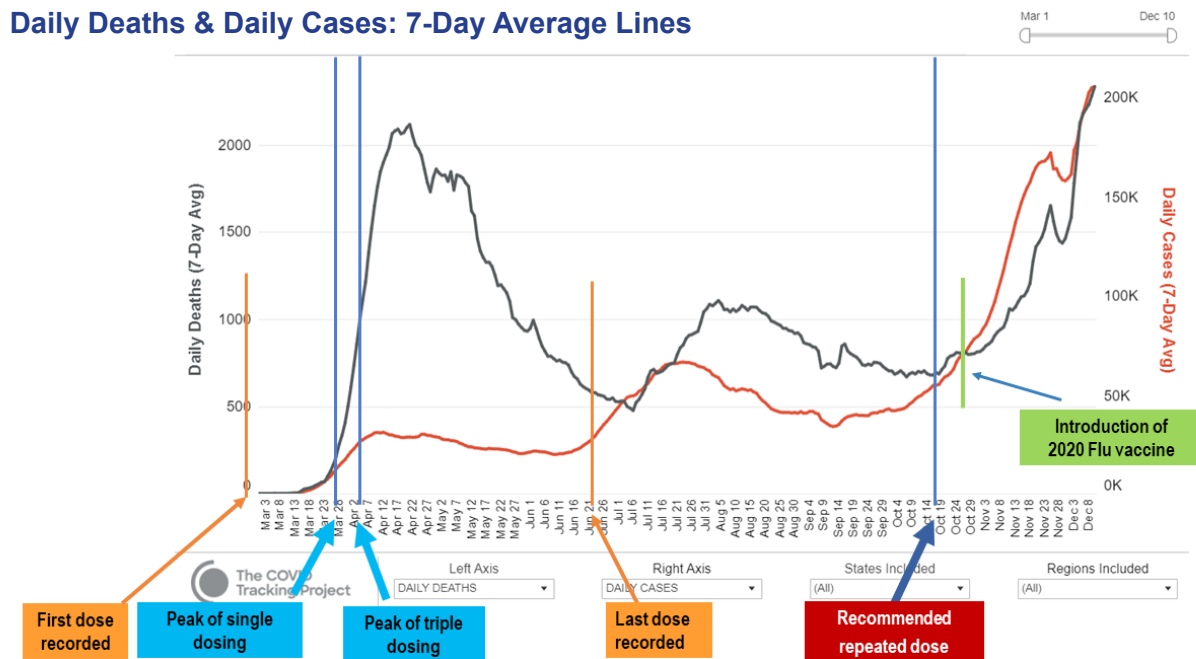

The chart on the right compares dosing dates with Novus-CV to active Covid-19 cases and reported deaths in 2020. Death rates are indicated in black (on the left axis), and active cases in red (on the right axis).^[i]

The first single dose was administered on February 24, 2020. The week of March 25-31 was the peak dosing period for the single dose. 201 doses were taken during that week. 198 triple doses were taken the week April 1-7. The last doses recorded were on June 24.

continued on next page...

We recommended all HP Supervisors and Family Members to repeat either the 1M triple dose or take a 10M triple dose on October 16. During the week of October 29, mass annual influenza immunization program was pushed in the United States.

Private Membership Association

In 2021, FHCi is focused on expanding protections for its HP Supervisors by implementing a Private Membership Association (PMA) structure. As alternative healthcare practitioners, we are well aware of the potential for government overreach when it comes to non-pharmaceutical products. When a PMA is properly in place, what occurs inside the PMA is generally not subject to any public law, regulation, or agency rule. Instead, the PMA involves persons asserting and standing on their unalienable constitutionally secured rights to contract outside of the public domain. When members of a PMA interact with each other privately and in the private domain, they are protected from censorship and control from the government and administrative agencies. FHCi is dedicated to preserving access to HP through products, education, training, community and service. This new PMA structure will solidify this mission, as well as protect the rights of HP Supervisors and Family Members.

2021

Advanced Training

One of the major benefits of collaboration with FHCi is our continuing education and advanced trainings. Our 10-year, long-term research

Our communication platform is a welcoming community where everyone can share, vent, commiserate, and collaborate.

showed that **both families and supervisors need to understand remedy responses and the immunological process** in regards to the circle of disease. The readiness of our HP Supervisors to attend numerous webinars, discussions, and lectures is what gives FHCi the ability to confidently provide HP to the public! It is this capacity to learn and grow while still honoring classical knowledge that will propel us into the future.

In the face of multiple problems with the current/outdated model of immunizations, HP Supervisors uplift, support, and turn to each other on our **communication platform**. The group is active with daily questions and suggestions and remains professional while bringing in the personal.

I'm triple trained in Homeoprophylaxis. One of the main reasons why I keep my certification through FHCi is ...The ability to explain and assuage client's concerns about HP with a strong understanding of homeopathic principles is important to maintaining integrity of HP Supervisors and the legitimacy of HP as a viable immune education system to the world.

- Ruth S. T., HP Supervisor

Our Focus in 2021

With the increase in demand for nosodes last spring, and with more people recognizing that health comes from within, FHCi is committed to making homeoprophylaxis a household word. What would it look like to check the HP box on a registration form for school, sports, or well-child visits? What would it be like to vote for a politician that supports strong immune systems and personal sovereignty? How would it feel to speak openly about your health choices and know that you're being heard and cared for?

Clearly there is energy in the world for homeoprophylaxis. We are prepared for this change in consciousnesses, which really has been here all along. People are making choices out of trust, rather than fear. Parents are saying this is enough - no more toxic injections for our children. Adults are recognizing that HP can benefit them too, as humans and pathogens have

co-evolved for millennia. FHCi is here, ready to work in conjunction with nature, not in opposition.

FHCi operates from a benevolent model of service. We are committed to the internal infrastructure that will manage the influx of participants, which includes education of HP Supervisors who are the support for HP Families, and maintaining connections along the supply chain. Stepping forward we look for sound strategy and procedures to make the visions of expanding HP come true. How do we craft our face to the world - how do we want to appear? By honoring peaceful coexistence - with pathogens, with the changes in life, with those new to homeoprophylaxis, and those already in community. There is a place for us all.

I am glad to be an HP Supervisor with FHCi since its founding. Not only does this work feel like being part of something important for the homeopathic profession, it feels like something important for humanity. - Amber C., HP Supervisor

Homeoprophylaxis Awareness

In April of every year the homeopathic community focuses efforts on outreach and communication with the public. In 2019, FHCi created its own annual awareness week from August 4th - 10th in advance of the new school year. **This is the time for us all to reach out** to families, pediatricians, legislators, and influencers. Tell them the benefits of homeoprophylaxis and membership with FHCi; we will support you!
